TELANGANA UNIVERSITY S.S.R. DEGREE COLLEGE, NIZAMABAD (C.C:5029) III SEMESTER INTERNAL ASSESSMENT I EXAMINATIONS BUSINESS STATISTICS QUESTION BANK

I. Multiple choice questions.				
1. Which of the following statements is true?		[d]		
a. Statistics are aggregates of acts	b. Statistics are numerically expressed			
c. Statistics are collected in a systematic manner	d. All of the above			
2. Statistics can best be considered as		[c]		
a. An art b. Science c. Both art a	s well as science	d. Neither art not science		
3. The scope of survey depends on		[a]		
a. The objectives b. Availability of time c. Resources	d. A and B only			
4. Data is generally obtained from		[c]		
a. Primary sources b. Secondary sources	c. Both a & b	d. None of these		
5. Secondary data		[b]		
a. Should never be used b. Sh	ould be used after car	eful scrutiny		
c. While scrutinizing the only thing to see is who colle	cted it d. None of t	he above		
6. The number of questions in a questionnaire should	l be	[d]		
a. 3 b. 15	c. 40			
d. As small as possible keeping in view the purpose of	f the survey			
7. While handling/editing primary data, we have to se	ee that the informatio	n contained in the		
questionnaire is		[d]		
a. Complete b. Consistent c. Acc	curate d. Al	l of the above		
8. Primary data is		[c]		
a. Always more reliable compared to secondary data				
b. Less reliable compared to secondary data				
c. Depends on the care with which data has been coll	ected			
d. Depends on the agency collecting the data				
9. Which of the following statements is true about dia	agrams?	[d]		
a. Diagrams reduce huge amount of data into simple	figure			
b. Diagrams bring out the essence of the underlying c	lata with great clarity			
c. Diagrams help in highlighting the trends in underly	ing data			
d. All of the above				
10. Which of the following statements is Not True about the statement of the following statements is not true about the statement of the state	out diagrams?	[c]		
a. Diagrams have limited ability to highlight small diff	erences in large meas	urements		
b. Diagrams cannot be analyzed further through stati	stics			
c. Diagrams are a superior substitute to tabular prese	ntations			
d. All of the above statements are true				
11. Which of the following is not a one dimensional d	iagram?	[c]		
a. Line Diagram b. Bar Diagra	am			
c. Rectangular Diagram d. All of the a	above are one dimens	ional diagrams		
12. Which of the following statements is True about I	Bar diagrams?	[b]		
a. They are two dimensional diagrams				
b. They consist of a group of equidistant				
c. The width of the rectangle is very important				
d. To analyze the diagram, width of the rectangle is m	neasured			
13. A manager wants to know the breakup of his sale	s into fixed costs, varia	able costs and profit. This data		
can be presented I the form of		[c]		
a. Line diagram b. Simple bar diagram c. Sul	b divided bar diagram	d. Deviation bar diagram		

14 is used is presenta	tion of net qua	ntities, which ca	n be positive or nega	itive [a]		
a. Deviation bar diagram b. Broken bar diagram						
c. Multiple Bar Diagram		d. Duo direction	nal bar diagram			
15. The breakup of a given whole	e, into its variou	us components,	is best presented as	[d]		
a. Broken bar diagram b. Dev	iation bar diagr	am c. Multi	ple bar diagram	d. Pie diagram		
16. Which of the following is not	a two dimensio	onal diagram?		[a]		
a. Bar diagram		b. Rectangular	diagram			
c. Square diagram		d. All of the abo	ove are two dimensio	nal diagrams		
17. Which of the following is not	an objective of	f an average?		[c]		
a. Represent the characteristics	of the entire ma	ass of data				
b. To facilitate comparison						
c. To provide clear, complete and	d meaningful co	onclusions				
d. To facilitate further analysis						
18. Which of the following is an a	average of posi [.]	tion?		[d]		
a. Arithmetic b. Geo	metric Mean	c. Harm	onic Mean d. Meo	dian		
19. Which of the following is not	true about arit	hmetic mean?		[c]		
a. It is rigidly defined	b. It pr	ovides a good ba	asis for comparison			
c. It is not impacted by extreme	values d. All o	f the above stat	ements are true abo	ut arithmetic mea	an	
20. Weighted arithmetic mean is	used when			[d]		
a. Importance of all items in a se	ries is not equa	1				
b. Classes of the same group con	tain widelv var	ving frequencies	5			
c. Ratios. percentages or rates a	re being averag	ed				
d. All of the above	0 0					
21. The weighted arithmetic mea	an is alwavs	than the s	simple arithmetic me	an [d]		
a. Greater b. Lower	c. Equa	l to d. canno	ot be said with certai	ntv		
22. For the purpose of selecting	a candidate for	a job, candidate	es are evaluated on v	arious parameter	s.	
Which average should be chosen	to decide on t	he right candida	ite?	[c]		
a. Simple arithmetic mean		b. weighted ari	thmetic mean	L - J		
c. Combined mean		d. Geometric m	iean			
23. Which of the following state	ments is not tru	e about the me	dian?	[b]		
a. It is a positional average	b. It is affected	d by extreme val	ues	[-]		
c. All observations need to be an	ranged in ascer	iding or descend	ling order before cal	culating the media	an	
d. All of the above statements ar	e true					
24. The positional measure that	divides the enti	ire series into 10) equal parts is called	[c]		
a Median b Qua	rtile	c Decile	d Percentile	[0]		
25. Dispersion measures				[a]		
a The scattering of a given set of	f observations			[0]		
b. The concentration of a given set	et of observations	ons				
c Both a and b						
d Neither a nor b						
26 When 2 or more distribution	s are to be com	nared then we	must consider	[b]		
a Absolute measures of dispersi	on	h Relative mea	sures of dispersion	[~]		
c Both a and h		d None of the	ahove			
27 Which of the following meas	ure is expressed	d as a nure num	her (without any unit	ts) which enables		
comparison of the levels of disne	ersion from a ce	entral tendency	across different serie			
a Inter quartile range		h Standard dev	viation	5. [C]		
c Coefficient of variance		d All of the she				
28 The following are the wages	of 10 workers o	of a factory Find	the range of variation	n·120 170 240	100	
105 205 300 160 150 180		a fuctory. Thu		[h]	<u>1</u> 00,	
a 100	h 200		~ 300	رما ط 0 5		
a. 100	5.200	(u. U.J		

29. Calculate co-ef	ficient	of rang	e						[c]	
Marks	0-10	10-20	20-30	30-40	40-50	50-60	60-70			
No. of students	5	8	12	20	15	7	3			
a. 0			b. 70				c. 1	d.2		
30. Mean deviatio	n of a s	series is	the arit	hmetic	averag	e of the	deviation	s of various items	from	[c]
a. Mean		b. Med	lian		c. eith	er Mear	n or Media	an d. None of t	he above:	
31. Given Q = 24, 0	Q = 36,	Co-effi	cient of	Quartil	ie devia	tion =			[b]	
a. 18	. ,	b. 0.42	9			c. 30		d. 60		
32. In a normal dis	tributi	on	-						[a]	
a. Mean = median	= Mod	le			b. Mea	an < me	dian > mo	de	[~]	
c Mean > median	> mod	e			d Anv	of the a	ahove rela	itions is nossible		
33 High correlatio	n hetw	e veen rai	nfall an	d stock	nrices	means			[c]	
a If rainfall increase	sos str	ock nrice	as will d	ofinitol	vincrea				[0]	
h If rainfall increa		ock price	s will d	ofinital	y docro	360				
c. If rainfall increa	ses, su	ock price		eriniter vr mav i	y ueere not incr	0250				
d Thoro is no rolat	tion ho	twoon	s may c	n may i	not inci	case				
u. There is no reid		a stata	alliali a monto io		ск рпсе	5			[0]	
34. Which of the f		ig statei	nents is	strue:	: + k		+ 10 :00 00		[C]	
a. Causation and c	orrelat	lon are	two wo	ras mea	aning tr	ie same	thing			
b. Correlation imp	lies tha	at the cr	nange in	a varia	ble is b	ecause	of the cha	inge in another va	riable	
c. Causation is the	relatio	onship b	etween	an eve	nt and	a secon	d event, w	where the second e	event is	
understood as a co	onsequ	ience of	the firs	t						
d. None of the abo	ove									
35. Which of the f	ollowir	ng can b	e a reas	on for h	nigh cor	relatior	n between	2 variables, with	วut havinរូ	g a
cause and effect re	elation	ship?							[d]	
a. Common factor	influer	ncing bo	oth varia	bles	b. Mut	ual dep	endence			
c. Pure chance					d. All c	of the at	ove			
36. Which of the f	ollowir	ng statei	ments is	strue?					[a]	
a. Two variables h	aving c	ausatio	n will ha	ave a hi	gh corr	elation				
b. Two variables h	aving c	ausatio	n will no	ot have	a high (correlat	ion			
c. Two factors hav	ing a h	igh corr	elation	will hav	e causa	ation				
d. There is no diffe	erence	betwee	n causa	tion and	d correl	ation				
37. When price inc	creases	, demai	nd decre	eases. T	his is a	n examp	ole of		[b]	
a. Positive correlat	tion	b. Neg	ative co	rrelatio	n	c. No c	orrelatior	n d. linear cor	relation	
38. Which of the following is not an example of Logical correlation? [c					[c]					
a. Correlation betw	veen p	rice of o	oil and p	orice of	gold					
b. Correlation between agricultural output and price of gold										
c. Correlation betw	veen g	old med	lals wor	h by Ind	ia at th	e Olymp	pics and pr	rice of gold		
d. All of the above	are ex	amples	of logic	al corre	lation		•	C C		
39. Which of the f	ollowir	ıg stateı	ments is	rue in	respect	of a sca	atter diagi	ram?	[d]	
a. If the points plo	tted or	the dia	agram a	re close	er to ea	ch othei	r. there is	a correlation		
b. If points are sca	ttered	there is	no corr	elation	or less	er corre	lation			
c. Shape of the sca	itter di	agram r	eveals v	whethe	r correl	ation is	nositive o	r negative, linear	or non-lin	lear
d All of the above		a9. a	ereals .				positive o	r negative, mean		cui
40 Which of the f	ollowir	o meth	ods of n	neasuri	ng corr	elation i	s imnacte	d hy extreme valu	امد؟	[h]
a Scatter diagram	methr	nd notin		licusuri	h Karl	Pearso	n's metho	d		[~]
c Spearman's Ran	k corre	u Nation r	nothod		d Con	current	deviation	method		
c. Spearman's Nam	K COILE		nethou		u. con	current		methou		
II. Fill in the blanks	·									
1 Precentation of	, qata d	hould e	nsura th	at data	collect	ed is no	t cluttero	d and that data ro	auired fo	r
specific analysis is	roadily	v svoilak		ur uata	Conect			a ana mai uala le	yun cu iui	1
	-faully	ravallal.			£					

- 2. <u>Interpretation</u> refers to drawing conclusions from data analysis
- 3. Statistical <u>methods</u> are the tools that are in the hands of the statistician
- 4. <u>Applied statistics</u> deals with application of statistical methods to specific problems

5. According to the Law of Statistical Regularity, if a large 'population' has to be studied, a statistician will be able to get the same results by studying a moderately large sample chosen at random

6. <u>Statistical investigation or statistical enquiry</u> is a process where relevant quantitative data is collected for the purpose of analysis to arrive at a conclusion

7. <u>Hypothesis</u> is the conclusion that is arrived at on the basis of observation, using deductive logic and needs to be tested

8. Data constitute the foundation of statistical analysis and interpretation

9. Diagrams are an effective Supplement to tabular presentation

10. While constructing a diagram, <u>Scale</u> should be selected consistent with the size of observations to be displayed

11. A diagram should ideally maintain a proportion of 1:1.4142 between the smaller side and the larger side respectively

12. A <u>Line</u> line diagram involves drawing multiple vertical lines; wherein different values of a variable x are presented on X axis and the corresponding frequencies for each value of x are presented on Y axis

13. The bar diagram to be used when only one variable is to be studied is <u>simple bar diagram</u>

14. If subdivided bar diagrams are presented on percentage basis i.e., each component as a percentage of the whole, it is said to be a <u>percentage bar diagram</u>

15. If two or more sets of data are to be presented simultaneously, multiple bar diagrams are used

16. Net profit/loss over the years is best presented in the form of deviation bar diagram

17. An <u>Average (measure of central tendency)</u> is a representative figure, a single value around which other items of the distribution congregate

18. <u>Arithmetic mean</u> of a series is the figure obtained by dividing the total values of the various items by their number

19. Arithmetic mean has an Upward4 bias

20. The simple formula to calculate arithmetic mean for individual observations is $\overline{X} = \frac{\sum X}{N}$

21. The <u>weighted arithmetic mean</u> clearly brings out the relative importance of the various components of a series

22. Weighted mean should be calculated when the importance of the items in a series is not equal

23. The sum of squares of deviations of a set of observations is the minimum when deviations are taken from the arithmetic average. This is known as <u>the property of 'least squares'</u> in arithmetic mean.

24. If each of the values of a variate X is increased by a constant k, the impact on arithmetic mean is that it increased by the same amount

25. Dispersion measures the extent to which the items vary from some central value

26. It can be inferred that an average is truly representative of the series if the measure of dispersion is small or low

27. <u>Absolute</u> measure of dispersion is one that is expressed in terms of the same unit in which the variable (or given data) is measured

28. <u>Range</u> is the difference between the values of the largest item and the value of the smallest items of a series

29. The formula for calculating coefficient of Range is $\frac{L-S}{L+S}$

30. Quartile Deviation shows the average amount by which the two quartiles differ from median

31. The formula for calculating coefficient of quartile deviation is $\frac{Q_3 - Q_1}{Q_3 + Q_1}$

32. <u>Standard</u> is the square root of the arithmetic average of the squares of the deviations measured from mean

33. <u>Correlation</u> is a quantitative measure of the degree or strength of relationship that may exist between two variables

34. There is a <u>high, positive</u> correlation between rainfall and stock prices

35. Positive correlation means that the direction of change is likely to be same

36. <u>Causation</u> implies that the change in a variable is because of the change in another variable

37. Correlation between two variables is <u>Linear</u> if the change in one variable in response to change in another variable is proportionate

38. Correlation between variables in social sciences is always Non-linear

39. When the correlation between two variables is not just a calculation but has a logical base or reasoning, such correlation is called <u>logical correlation</u>

40. The <u>shape</u> of the scatter diagram reveals whether correlation is positive or negative, linear or non-linears
