39) defines logical structure of document. Ans. Document object					
40) method of window object calls a function or evaluates an expression after a specified number of milliseconds. Ans.setTimeout ()					
41) What is HTML?					
HTML stands for HyperText Markup Language and is the language of the internet. It is the standard text formatting language used for creating and displaying pages on the Internet					
HTML documents are made up of the elements and the tags that format it for proper display on pages.					
42) What are HTML tags?					
We use HTML tags for placing the elements in the proper and appropriate format. Tags use the symbols <, and > to set them apart from the HTML content.					
The HTML tags need not be closed always. For example, in the case of images, the closing tags are not required as tag.					

Attributes are the properties that can be added to an HTML tag. These attributes change the way the tag behaves or is displayed. For example, a tag has ansrc attribute, which you use to add the source from which the image should be displayed.

43) What are HTML Attributes?

We add attributes right after the name of the HTML tag, inside the brackets. We can only add the attributes to opening or self-closing tags, but never be in closing tags.

44) What is a marquee in HTML?

Marquee is used for scrolling text on a web page. It scrolls the image or text up, down, left, or right automatically. To apply for a marquee, you have to use </marquee> tags.

45) What are void elements in HTML?

Void elements in HTML are tags that do not require a closing tag. They are used to insert images, line breaks, and other content that does not require additional information.

46) What is the advantage of collapsing white space?

Collapsing white space in HTML can help to reduce the size of web pages and make them load faster. It involves removing unnecessary white space between HTML elements.

47) What are HTML Entities?

HTML Entities are special characters used to represent characters that cannot be typed on a keyboard. They are often used to display special symbols and foreign characters.

48) What was the purpose of developing CSS?

CSS was developed to define the visual appearances of websites. It allows developers to separate the structure and content of a website that was not possible before.

49) What is the difference between a class and an ID?

Ans. Class is a way of using HTML elements for styling. They are not unique and have multiple elements. Whereas ID is unique and it can be assigned to a single element.

50) Name some font-related CSS attributes.

The font-related attributes are Font- style, variant, weight, family, size, etc.
